## DID YOU KNOW

Mining, construction, and manufacturing industries have the highest prevalence of workers with hearing loss. 34% of workers exposed to hazardous levels of noise report not utilizing hearing protection. Of the more than 20,000 workplace hearing loss cases each year, most of them result in permanent hearing loss. A basic set of earplugs are able to lower noise levels by up to 30 dB, providing adequate noise reduction for most hazardous sounds. With so many cases of permanent hearing loss stemming from workplace noise, protecting your ears with earplugs is a simple and effective way to safeguard your hearing health.
