

Domestic threaded rod has a plain finish and is packed with a material certification.

What is the primary use of threaded rod?

Threaded rod is a fastener and has many applications but ultimately is used to connect two materials together. Threaded rod can be used with various materials including concrete, wood and metal and can be used when the longest bolt is too short for the job. Threaded rod can also offer stabilization and is known to be durable, sturdy and strong. Threaded rod is useful in any situation where speed and ease of assembly is necessary.

Who uses threaded rod?

A variety of industries including but not limited to construction, plumbing, manufacturing, marine, agricultural, oil extraction and contractors.
