DID YOU KNOW

July is chemical spill prevention month. Having spill control products on hand so your team can respond quickly and confidently is essential. But what can you do to prevent spills from happening in the first place? Perform a wellness check on any equipment in the workplace that could leak, such as:

- Hydraulic lines
- Pipes and hoses
- Containers holding fluids

You'll want to check for any wear and tear, corrosion, rust, or anything that looks as if it has damaged the integrity of the equipment and could lead to a leak. Additional steps you can take to avoid spills include: never store containers upside down; DO store containers on seep-through floor mats; and do not store containers where they may get knocked over.
